

QUALITY POLICY

Publication Date 23.06.2022 | Revision Date 25.07.2025 R2

The Quality Policy, an annex to the Integrated Management Systems Policy, has been prepared to ensure customer satisfaction, reliability, and continuity in Ateş Wind Power's products and services. This policy provides a corporate framework that supports maintaining and improving the level of quality required by the industry, supporting our growth strategies, preventing errors, seizing opportunities, and embedding a culture of continuous improvement throughout the organization.

The Quality Policy applies to all employees, managers, subcontractors, suppliers, business partners, and representatives within Ateş Wind Power. It covers all factories under Ateş Wind Power.

Within the scope of this policy, Ateş Wind Power accepts, undertakes, and declares the following principles:

- Understand customer needs and expectations, and provide reliable products/services that meet requirements.
- Comply with legal and regulatory requirements and customer specifications.
- Regularly monitor customer satisfaction and use feedback as an opportunity for improvement.
- Manage all quality-affecting processes in a planned, controlled, and measurable manner, adopting a preventive approach to errors.
- Identify risks that may affect quality before production or changes; implement planned and controlled change management.
- Set quality objectives aligned with the company's vision, mission, and values; ensure the deployment of objectives at all levels; monitor quality performance through indicators and analyze the results.
- Continuously improve the quality management system and carry out necessary actions to achieve this.
- Implement regular training and competency development programs to raise quality awareness among all employees.
- Encourage shared responsibility for quality at every level; strengthen corporate quality culture through leadership and exemplary behavior.
- Address problems transparently; produce quick, effective, and permanent solutions.
- Evaluate suppliers based on quality criteria; support their development and ensure quality continuity in the supply chain.
- Base decision-making processes on verifiable data and objective analyses.
- Encourage creative ideas and lean approaches that will reduce waste and improve quality.

Our Quality Policy is implemented by integrating it into the company's strategic planning, design, production, procurement, project execution, and after-sales service processes. Top Management regularly monitors and evaluates the implementation of the Quality Policy. Evaluations are carried out based on audits, process controls, customer feedback, nonconformity and corrective action records, supplier performance, delivery, and quality indicators. The evaluation results are analyzed to identify risks and improvement opportunities, and are shared transparently with relevant units and top management. External expertise is sought when necessary.

The primary responsibility for implementing the Quality Policy lies with the Factory Directors, who are responsible for ensuring its effectiveness and reporting the results to the Board of Management. In addition, each department manager is responsible for ensuring that processes within their area comply with quality requirements. All employees and suppliers are responsible for adhering to quality requirements.

This policy is reviewed by Top Management at least once a year. It is updated when necessary in line with the performance data evaluated at Management Review meetings, customer satisfaction data, the status of quality objectives, process performances, audit results, changes in legal requirements, and strategic business plans.
